Verified Help. Trusted Homes.

FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

Household Workforce Marketplace – Customer App, Worker App & Web Admin Portal

Attribute	Detail
Product	SevaNest
Document type	Functional Requirements Document
Release covered	Version 1 (first production release)
Companion documents	SevaNest PRD; SevaNest SRS
Primary launch market	Hyderabad
Platforms	Android, iOS & Web Admin
Version / Status	1.0 – Draft for review and sign-off
Classification	Confidential

1. Introduction

1.1 Purpose

This Functional Requirements Document (FRD) describes what SevaNest Version 1 must do, feature by feature: the actors, flows, fields, business rules and exception handling for every functional module. It is a companion to the SevaNest SRS, which carries the non-functional, interface and data requirements.

1.2 Scope

The FRD covers the Customer Mobile App, the Worker Mobile App and the Web Admin Portal for Version 1: OTP authentication, profiles, service discovery and search, worker KYC and verification, interview/trial and booking, payments, attendance/status, ratings, replacement, support, notifications, reports, configuration, role-based access and audit.

Out of scope for V1: automated payroll and statutory compliance, worker loans/credit, insurance marketplace, facial-recognition attendance, complex AI recommendation engine, full apartment-society ERP, advanced corporate workforce module and multi-country operations.

1.3 Intended Audience

- Product owner and business analysts – to confirm behaviour and business rules.
- UI/UX designers – to design screens and flows.
- Developers and QA – to build and test against defined flows, fields and rules.
- Operations team – to validate admin workflows before UAT.

1.4 Conventions and Basis of Content

- Flows, roles, categories, engagement types, verification checks and report lists come directly from the PRD.
- Items headed or marked "(Proposed)" are not stated in the PRD. They are suggested field rules, state models, permissions and metric definitions needed to make the functions buildable, and must be confirmed at requirements freeze/design sign-off.
- "Shall" denotes a mandatory behaviour. Module IDs use the form FM-NN.
- Pricing, data retention and other items the PRD leaves open are not given values here; see Section 9.

1.5 Actors

Actor	Description
Customer	Household user who hires or manages household staff
Worker	Maid, driver, cook, babysitter, elderly-care helper or cleaning helper
Operations Admin	Runs the marketplace day to day: verifies, matches, assigns, supports, replaces, monitors
Super Admin	Platform control: roles, policies, reports, configuration, audit access
Verification Executive	Reviews documents and verification status, adds remarks, handles re-verification
Support Executive	Handles tickets, disputes, escalations and resolution tracking
System	Automated actions: notifications, state updates, payment callbacks

1.6 Service Categories and Engagement Types

Category	Typical Engagement
House Maid	Part-time / Full-time / Live-in
Driver	Hourly / Daily / Monthly
Cook	Part-time / Monthly
Babysitter	Hourly / Full-time
Elderly Care Helper (non-clinical)	Shift / Full-time
Cleaning Helper	One-time / Hourly

Customers can choose full-time, part-time, daily, hourly or live-in engagement. New categories are added through admin masters, not app changes.

2. Role and Permission Matrix (Proposed)

The PRD defines the purpose of each admin role and requires role-based access with restricted KYC document access. The detailed matrix below is proposed and shall be confirmed during design.

Capability	Super Admin	Ops Admin	Verification Exec	Support Exec
Dashboard	Full	Full	Limited (KYC)	Limited (support)
Customer management	Full	Full	No	View
Worker management	Full	Full	View, verification status	View
KYC documents – view/review	Full	Full	Full	No
Verification approve/reject	Full	Full	Full	No
Booking management	Full	Full	No	View
Payments and refunds	Full	View	No	View
Support tickets	Full	Full	No	Full
Replacement review	Full	Full	No	Full
Reports	Full	Full	Limited	Limited
Configuration masters	Full	No	No	No
Role management and audit logs	Full	No	No	No

3. Functional Modules

FM-01 Authentication and Session

Item	Detail
Description	Mobile OTP registration and login for customers and workers; credential-based login with roles for admin users.
Actors	Customer, Worker, Admin users
Preconditions	User has a working mobile number and network access (admin users have an account created by Super Admin).

Main Flow

1. User enters mobile number in the Customer or Worker app.
2. System sends an OTP by SMS.
3. User enters the OTP.
4. System verifies the OTP.
5. If the number is new, the user continues to profile creation; otherwise to the home screen.
6. System issues a token-based session.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Mobile number	Text	Yes	Valid Indian mobile number format
OTP	Numeric	Yes	Fixed length; expires after a configurable period; limited attempts
Admin email/username	Text	Yes (admin)	Registered admin account
Admin password	Secret	Yes (admin)	Stored securely; never shown

Business Rules

- OTP and API endpoints are rate-limited with abuse protection.
- Sessions are token-based; the app type determines the user type (customer or worker).
- Suspended or blocked users cannot log in.
- OTP resend is limited and its limits are configurable.

Alternate and Exception Flows

- Wrong OTP: error shown, retry within attempt limit.
- Expired OTP: user can request a new one.
- Attempt/resend limit exceeded: temporary block with message.
- SMS failure: retry and show a clear message.

Postconditions

- User has an authenticated session; admin actions are tied to a role.

FM-02 Customer Profile and Addresses

Item	Detail
Description	Customer creates and manages profile, saved addresses and language preference; basic customer verification.
Actors	Customer, Admin
Preconditions	Customer authenticated via OTP.

Main Flow

1. Customer enters name, email, address and preferred language.
2. Customer saves one or more addresses.
3. System performs basic customer verification (mobile, address, basic profile checks).
4. Customer profile becomes active.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Name	Text	Yes	Non-empty; letters and common name characters
Email	Text	Yes	Valid email format
Address	Structured	Yes	Line, area, city, pin code; location can be set from the map
Preferred language	Select	Yes	From supported languages
Mobile number	Text	Yes	Verified via OTP; read-only

Business Rules

- Multiple saved addresses are allowed; one can be marked default.
- Customer verification status is visible to admin.
- Admin can add notes, change status or suspend a customer.

Alternate and Exception Flows

- Invalid email or address: field-level error, nothing saved.
- Verification checks fail: profile stays in pending status for admin review.

Postconditions

- Customer profile and addresses are stored and can be used for search and booking.

FM-03 Service Discovery and Worker Search

Item	Detail
Description	Customer selects a service and engagement requirements and views matching verified workers.
Actors	Customer
Preconditions	Customer has a profile and at least one address (or enters a location).

Main Flow

1. Customer selects a service category.
2. Customer chooses full-time, part-time, daily, hourly or live-in engagement.

3. Customer enters location, preferred timings and start date, and a salary/budget range where applicable.
4. System filters workers by category, location and availability.
5. System shows paginated worker cards.
6. Customer opens a worker profile, and can shortlist/favourite the worker.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Service category	Select	Yes	Only categories enabled in admin masters
Engagement type	Select	Yes	Full-time, part-time, daily, hourly, live-in (as allowed for the category)
Location	Address/ map	Yes	Within an enabled service area
Preferred timings	Time range	Yes	Start earlier than end
Start date	Date	Yes	Today or later
Budget range	Amount range	Optional	Minimum not above maximum

Business Rules

- Worker cards show photo, experience, skills, language, area, availability, verification badge and rating/review summary.
- Full identity documents are never shown to customers.
- Search returns results quickly with pagination.
- Verification badges follow the verification status model (Section 5).

Alternate and Exception Flows

- No matching workers: show message and offer to widen filters or request admin matching.
- Location outside enabled service areas: inform the customer.

Postconditions

- Customer has a shortlist and can proceed to interview/trial request.

FM-04 Worker Onboarding and Work Profile

Item	Detail
Description	Worker registers, builds a work profile and submits identity details for verification.
Actors	Worker, Admin (assisted onboarding)
Preconditions	Worker has a mobile number.

Main Flow

1. Worker registers using OTP.
2. Worker adds profile photo.
3. Worker uploads Aadhaar/KYC documents.
4. Worker enters address and emergency contact.
5. Worker enters previous employer/reference details.

6. Worker selects role(s), experience, languages, preferred work locations, expected salary, available timings and full-time/part-time/live-in preference.
7. Worker submits profile for verification.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Profile photo	Image	Yes	Image file; size limit applies
KYC document	File/Image	Yes	Allowed types and size limit; stored securely
Address	Structured	Yes	Line, area, city, pin code
Emergency contact	Name + mobile	Yes	Valid mobile number
Previous employer / reference	Text + mobile	Optional	Name and contact details
Role(s)	Multi-select	Yes	From enabled categories
Experience	Number	Yes	Whole years/months
Languages	Multi-select	Yes	At least one
Preferred locations	Multi-select	Yes	Enabled service areas
Expected salary	Amount	Optional	Positive amount
Available timings	Time ranges	Yes	Valid ranges
Engagement preference	Select	Yes	Full-time, part-time, live-in

Business Rules

- Worker app uses large buttons, limited text and simple status labels, with local-language readiness.
- Complex forms are split into short steps with progress saved between steps.
- Admin or field staff can assist onboarding.
- Worker cannot receive job opportunities until the configured verification requirements are met (see FM-05).

Alternate and Exception Flows

- Document unreadable or wrong type: worker is asked to upload again.
- Interrupted onboarding: worker resumes at the last saved step.

Postconditions

- Worker profile is submitted and appears in the admin verification queue.

FM-05 Worker Verification and Trust

Item	Detail
Description	Admin-side review of worker documents and checks, with status tracking and audit trail.
Actors	Verification Executive, Operations Admin, Super Admin
Preconditions	Worker has submitted a profile and documents.

Main Flow

1. Verification Executive opens the worker in the verification queue.
2. Executive reviews each document and check: mobile OTP, government ID, address, emergency contact, previous employment reference and police verification status/document.
3. Executive approves or rejects each item with remarks.
4. System updates the verification status and badge shown to customers.
5. Worker is notified of the outcome.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Check type	Select	Yes	Identity, address, emergency contact, previous employment, police verification
Status	Select	Yes	See Section 5
Remarks	Text	Yes on reject	Reason for rejection or notes
Expiry / recheck date	Date	Optional	Future date

Business Rules

- A worker is shown as fully verified only after all configured checks are approved by an authorized operations user.
- Police verification is tracked as status/document; the process itself is external as applicable.
- Manual status updates must be possible if a verification partner is unavailable.
- Sensitive documents are visible only to permitted roles and are masked in routine screens.
- Every verification action is written to the audit log with actor, action and timestamp.
- Re-verification can be triggered on expiry/recheck.

Alternate and Exception Flows

- Rejected item: worker is asked to resubmit; previous attempts stay in history.
- Partner delay: executive records manual status and remarks.

Postconditions

- Verification status and history are stored; the worker badge reflects the current state.

FM-06 Interview/Trial and Booking

Item	Detail
Description	Customer requests an interview or trial with a worker, confirms the worker and completes the booking.
Actors	Customer, Worker, Operations Admin, System
Preconditions	Customer has shortlisted a verified (or verification-in-progress, as configured) worker.

Main Flow

1. Customer requests an interview or trial and selects a preferred date and time.
2. System sends the opportunity and requirement summary to the worker.

3. Worker accepts or declines and confirms the schedule.
4. Interview/trial takes place and the outcome is recorded.
5. Customer confirms the worker.
6. Customer pays the applicable booking/platform fee (see FM-07).
7. Booking is confirmed; the worker confirms the start date.
8. Customer tracks progress on the booking status timeline.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Interview/trial type	Select	Yes	Interview or trial
Preferred date and time	Date-time	Yes	Future date-time
Start date	Date	Yes	On or after confirmation
Outcome	Select	Yes (after)	Recorded by customer/admin
Cancellation reason	Text	Yes on cancel	Free text/list

Business Rules

- Booking status follows the booking state model (Section 4); only permitted transitions are allowed.
- Admin can match, assign, schedule, confirm, cancel and replace through the admin portal.
- If a worker declines, the request returns to matching.
- Booking history remains auditable.

Alternate and Exception Flows

- Worker does not respond: admin is alerted and can reassign.
- Payment fails: booking stays pending payment.
- Customer cancels: status moves to cancelled, with fee handling per configured rules.

Postconditions

- A confirmed booking exists with a selected worker and start date.

FM-07 Payments

Item	Detail
Description	Payment of booking/platform fees through the payment gateway, with receipts, history and refund status.
Actors	Customer, Operations Admin, Super Admin, System
Preconditions	Customer has confirmed a worker and a fee is applicable.

Main Flow

1. System shows the applicable fee computed from admin-configured fee settings.
2. Customer pays by UPI, card or net banking via the gateway.
3. Gateway returns success or failure to the system.
4. System updates the payment and booking status.
5. System generates a receipt and records the transaction.

- Customer can view transaction history and refund status.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Amount	Amount	Auto	From fee configuration; not editable by customer
Payment method	Select	Yes	UPI, cards, net banking
Gateway reference	Text	Auto	Stored for reconciliation
Refund status	Status	Auto	Shown where applicable

Business Rules

- Payment success or failure must be correctly reflected against the booking.
- Fee values are configurable and not hard-coded; the system supports booking fee, placement fee, subscription, verification fee, replacement plan, apartment partnership and employer services models.
- Payment changes are written to the audit log.
- Payment provider access goes through an abstraction layer.

Alternate and Exception Flows

- Payment failure/timeout: customer can retry; booking stays unchanged.
- Gateway callback delayed: system reconciles the status before final state.
- Refund: admin initiates and the status is shown to the customer.

Postconditions

- Payment record, receipt and booking status are consistent.

FM-08 Worker Job Workflow

Item	Detail
Description	Worker receives job opportunities, accepts or declines, attends interview/trial and starts the job.
Actors	Worker, System, Operations Admin
Preconditions	Worker is registered and matched to a customer requirement.

Main Flow

- Worker receives a job opportunity notification.
- Worker views the customer requirement summary.
- Worker accepts or declines.
- If accepted, worker sees the interview/trial schedule.
- After confirmation, worker sees job confirmation and start date.

Business Rules

- Worker sees a requirement summary only; full customer details follow the safety/privacy policy.
- Declining does not remove the worker from future matching unless admin changes status.
- Worker can see current job details, earnings/payment reference where applicable, and ratings.

Alternate and Exception Flows

- No response within the allowed time: admin is alerted and may reassign.
- Schedule conflict: worker can decline or request another slot.

Postconditions

- Worker has a confirmed job with a start date, or the opportunity is closed.

FM-09 Attendance and Status Tracking

Item	Detail
Description	Status-based tracking of service delivery visible to customer and worker.
Actors	Worker, Customer, Operations Admin
Preconditions	Booking is confirmed and the service has started.

Main Flow

1. Worker updates attendance/status for the day.
2. System records the date, status and any exception.
3. Customer views attendance/status and service history.
4. Admin can view and correct entries with an audit record.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Date	Date	Auto	Current date or permitted past date
Status	Select	Yes	Present, absent, exception (configurable)
Exception note	Text	Optional	Reason

Business Rules

- V1 attendance is status-based; GPS/geofenced and facial attendance are Phase 2.
- Customer and worker see the same recorded status.

Alternate and Exception Flows

- Worker forgets to update: customer or admin can raise an exception.
- Disagreement on a day: raised as a support ticket.

Postconditions

- Attendance history is stored per booking.

FM-10 Ratings and Reviews

Item	Detail
Description	Customers rate workers after eligible engagements; ratings feed worker profiles and reports.
Actors	Customer, Worker, Admin
Preconditions	The engagement is completed or otherwise eligible for rating.

Main Flow

1. Customer opens the completed or eligible engagement.
2. Customer gives a rating and optional review.
3. System stores the rating and updates the worker rating summary.
4. Worker can see received ratings.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Rating	Number	Yes	Within the configured scale
Review text	Text	Optional	Length limit; abusive content can be moderated by admin

Business Rules

- Ratings are tied to completed/eligible engagements only.
- Eligibility rules are to be defined (see Section 9).
- Top-rated workers are shown in reports.

Alternate and Exception Flows

- Customer attempts rating before eligibility: not allowed.

Postconditions

- Rating is stored and included in the rating summary.

FM-11 Replacement Workflow

Item	Detail
Description	Customer requests a replacement worker; Support/Admin reviews and matches alternatives while keeping history auditable.
Actors	Customer, Support Executive, Operations Admin, Worker
Preconditions	An active or recent engagement exists.

Main Flow

1. Customer selects Request Replacement.
2. Customer provides the reason and supporting notes.
3. Support/Admin reviews eligibility.
4. System updates the current engagement status.
5. Alternative workers are matched.
6. Customer selects a replacement worker.
7. New worker is confirmed and the history is retained.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Reason	Select + text	Yes	Reason from list; notes for details
Supporting notes	Text	Optional	Length limit

Field	Type	Required	Validation / Rule
Decision	Select	Yes (admin)	Approved or rejected, with remarks

Business Rules

- Eligibility is reviewed by Support/Admin (rules to be defined; replacement plans may extend coverage).
- Replacement is recorded with reason, approval and replacement booking.
- Original and replacement bookings are linked and auditable.

Alternate and Exception Flows

- Request rejected: customer is informed with remarks and can raise a support ticket.
- No alternative available: request stays open and admin is alerted.

Postconditions

- Engagement status is updated and a replacement booking exists, or the request is closed with a reason.

FM-12 Support, Complaints and Safety

Item	Detail
Description	Ticketing for customers and workers, plus report/block, escalation and suspension controls.
Actors	Customer, Worker, Support Executive, Operations Admin, Super Admin
Preconditions	User is logged in.

Main Flow

1. User raises a support request or complaint with a category and description.
2. System creates a ticket and assigns an owner.
3. Support Executive works the ticket, escalates if needed and records resolution.
4. User is notified of progress and closure.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Category	Select	Yes	From configured list
Priority	Select	Auto/ admin	Set by rules or admin
Description	Text	Yes	Length limit
Owner	User	Auto/ admin	Support/admin user
Resolution	Text	Yes on close	Outcome recorded

Business Rules

- Tickets track assignment, escalation and resolution against an SLA.
- Report/Block is available to customers and workers.

- Admin can suspend workers and customers; complaint history is retained.
- Emergency contact is visible according to policy.
- Critical actions are audit-logged.

Alternate and Exception Flows

- SLA breach: ticket is escalated automatically.
- Safety incident: escalated to Operations/Super Admin.

Postconditions

- Ticket is resolved and kept in history.

FM-13 Notifications

Item	Detail
Description	Event-driven notifications to customers, workers and admins.
Actors	System
Preconditions	A triggering event occurs.

Main Flow

1. System detects an event.
2. System selects the configured template and channel.
3. System sends the notification via push, SMS or optional WhatsApp.
4. System records delivery status.

Business Rules

- Channels are push (Firebase Cloud Messaging), SMS and optional WhatsApp.
- Templates are configurable by admin.
- Delivery status is stored; provider failures are retried gracefully.
- Events and channels follow the matrix in Section 6.

Alternate and Exception Flows

- Delivery failure: retry, then log the failure for admin.

Postconditions

- Notification and delivery status are recorded.

FM-14 Admin and Operations Portal

Item	Detail
Description	Web portal for operations: dashboard, customer and worker management, verification, booking, payments, support, reports and configuration.
Actors	Operations Admin, Super Admin, Verification Executive, Support Executive
Preconditions	Admin user is logged in with a role.

Main Flow

1. Admin opens the dashboard for bookings, active workers, pending KYC, complaints, replacements and collections.

2. Admin works in the permitted module(s).
3. System records critical actions in the audit log.

Business Rules

- Customer Management: profiles, status, bookings, history, complaints, notes.
- Worker Management: profiles, documents, availability, skills, rating, blacklist/status.
- Verification: document review, verification status, expiry/recheck, remarks.
- Booking Management: new request, match, interview, trial, confirm, cancel, replace.
- Payments: transaction status, fee records, refunds, invoice/reference exports.
- Support: ticket creation, assignment, escalation, resolution SLA.
- Reports: bookings, conversion, category demand, location demand, worker utilization.
- Configuration: categories, areas, fees, plans, notification templates, roles.

Alternate and Exception Flows

- Unauthorized access attempt: access denied and logged.
- Concurrent edits on the same record: last change is flagged or blocked with a message.

Postconditions

- Changes are saved and audit-logged.

FM-15 Access Control and Audit

Item	Detail
Description	Role-based access to admin features and sensitive data, with audit logging.
Actors	Super Admin, all admin users
Preconditions	Roles and permissions are configured.

Main Flow

1. Super Admin creates or edits roles and assigns users.
2. System enforces permissions on every screen and API call.
3. System writes audit entries for critical actions.

Business Rules

- Role restrictions prevent unauthorized access to sensitive screens.
- KYC document access is limited by role; routine screens mask sensitive data.
- Audit entries hold actor, action, timestamp and record, covering verification, payment and user-status changes.
- Super Admin can access audit logs.

Alternate and Exception Flows

- Role change takes effect on next request/session (to be confirmed at design).

Postconditions

- Permissions are enforced and actions are traceable.

FM-16 Fee and Configuration Masters

Item	Detail
Description	Admin configuration of categories, areas, fees, plans, notification templates and roles.
Actors	Super Admin
Preconditions	Super Admin is logged in.

Main Flow

1. Super Admin opens Configuration.
2. Super Admin adds or edits a category, area, fee, plan, template or role.
3. System validates and saves the change.
4. Change applies to new transactions and screens without an app release.

Field Definitions and Validations (Proposed)

Field	Type	Required	Validation / Rule
Category	Text + status	Yes	Unique name; enabled/disabled
Area	Text + status	Yes	Unique within the city; enabled/disabled
Fee	Amount + type	Yes	Positive amount; linked to a revenue model
Notification template	Text	Yes	Valid placeholders

Business Rules

- Fee values are never hard-coded.
- New services are enabled through masters, not a new app design.
- Changes are audit-logged.

Alternate and Exception Flows

- Invalid or duplicate value: rejected with a message.

Postconditions

- Configuration is stored and used by the apps and portal.

4. Booking State Model (Proposed)

The PRD requires a booking state machine and lists the admin booking actions (new request, match, interview, trial, confirm, cancel, replace). The states below are proposed to implement them and shall be confirmed at design sign-off.

State	Meaning	Allowed Next States	Triggered By
New Request	Customer requirement submitted	Matched, Cancelled	Customer / System
Matched	Worker(s) matched to the requirement	Interview/Trial Scheduled, New Request (if declined), Cancelled	Admin / System
Interview/Trial Scheduled	Date and time agreed with worker	Interview/Trial Completed, Matched (reschedule or decline), Cancelled	Customer / Worker / Admin
Interview/Trial Completed	Interview or trial held; outcome recorded	Pending Payment, Matched, Cancelled	Customer / Admin
Pending Payment	Worker chosen; fee awaiting payment	Confirmed, Cancelled	Customer / System
Confirmed	Fee paid; start date set	Active, Cancelled	System / Worker
Active	Service has started	Completed, Replacement Requested	Worker / System
Replacement Requested	Customer has asked for a replacement	Replaced, Active (rejected), Cancelled	Customer / Admin
Replaced	Closed; linked to a new booking	(final)	Admin
Completed	Engagement ended; ratings enabled	(final)	Customer / Admin
Cancelled	Booking cancelled with reason	(final)	Customer / Admin

Admins may change a booking only to states permitted from its current state. Every transition is recorded with actor and timestamp.

5. Verification Status Model (Proposed)

Status	Meaning	Next Status
Not Submitted	Document or detail not yet provided	Submitted
Submitted	Provided and waiting for review	In Review
In Review	Being checked by an authorized user	Approved, Rejected
Approved	Check passed, with reviewer and timestamp	Recheck Due
Rejected	Check failed; remarks recorded	Submitted (after resubmission)
Recheck Due	Expiry/recheck date reached	Submitted, In Review

Worker-level badge: "Verified" only when every configured check is Approved; otherwise the worker is shown as verification in progress. The set of mandatory checks is configurable by operations.

6. Notification Matrix (Proposed)

Event	Recipient	Channels
OTP	Customer / Worker	SMS
Job opportunity	Worker	Push, SMS
Interview/trial requested or scheduled	Worker, Customer	Push, SMS
Booking confirmed	Customer, Worker	Push, SMS, WhatsApp (optional)
Payment success / failure	Customer	Push, SMS
Verification approved / rejected	Worker	Push, SMS
Replacement update	Customer, Worker	Push, SMS
Ticket created / updated / closed	Customer / Worker	Push
Recheck due	Worker, Admin	Push, SMS

Wording and enabled channels per event are controlled through admin-configured templates.

7. Reports and Metrics

The PRD lists the reports below. Calculation definitions are proposed and shall be confirmed with the business team.

Report	Definition (Proposed)
New customers	Customers registered per day/week/month
Worker registrations and verification conversion	Registrations; share of registered workers who reach verified status
Booking requests vs confirmed bookings	Count of requests compared with confirmed bookings
Category-wise demand	Requests grouped by service category
Area-wise demand	Requests grouped by service area
Worker utilization	Share of verified workers with an active booking
Interview-to-confirmation conversion	Confirmed bookings divided by interviews/trials held
Cancellation rate	Cancelled bookings divided by total bookings
Replacement rate	Replacement requests divided by active/completed bookings
Payment collections	Total successful payments by period and fee type
Support ticket volume and resolution time	Tickets created and average time to resolution
Top-rated workers and repeat customers	Ranking by rating; customers with more than one booking

8. Functional Acceptance Criteria

ID	Criterion
AC-01	A new customer can register via OTP and create a valid profile.
AC-02	A worker can register, upload required documents and define service preferences.
AC-03	Admin can approve/reject verification items with remarks.
AC-04	Customer can search/filter suitable workers and view profiles.
AC-05	Customer can request interview/trial and complete a booking.
AC-06	Payment success/failure is correctly reflected against the booking.
AC-07	Admin can track and change permitted booking states.
AC-08	Customer can raise replacement/support requests.
AC-09	Ratings are tied to completed/eligible engagements.
AC-10	Role restrictions prevent unauthorized admin access to sensitive screens.
AC-11	Critical workflows pass UAT on agreed Android/iOS test devices and supported browsers.

9. Open Items

No values have been invented for the following. They are to be decided before design sign-off or launch.

#	Open Item
1	Actual pricing and fee values (configurable in admin; finalized through market testing)
2	Data retention and deletion policy
3	Legal review of terms, privacy policy and consent flows
4	Trademark, company-name and domain availability for "SevaNest"
5	External verification processes (e.g., police verification) and verification partner
6	Confirmation of the proposed booking and verification state models
7	Confirmation of the proposed role permission matrix
8	Field-level validation limits (OTP length/expiry/attempts, file sizes, text lengths)
9	Eligibility rules for replacement and for ratings
10	Policy for emergency-contact visibility and sensitive-document access
11	Mandatory set of verification checks before a worker is shown as verified
12	Agreed Android/iOS test devices and supported browsers
